Everything in this guide

The screenshots show an example wallet (0x4b2f...4b3c) and example amounts. Your screen shows your own.

Start here 3

Before you start 4

On a phone 5

Part A · Stake your #SECT 6

01 · Open the staking page 6

02 · Press “Connect wallet” 7

03 · Choose your wallet 8

04 · Check that you are connected 9

05 · Type how many #SECT you stake 10

06 · Press “Deposit #SECT” and approve 11

07 · Confirm the deposit 12

Part B · Turn on your Hash Node 13

08 · Open the dashboard and press “Connect wallet” 13

09 · Choose your wallet and accept the test network 14

10 · Get free Sepolia ETH for gas 15

11 · Claim 5,000 free tSECT 16

12 · Buy the Node Kit · 50 TH/s 17

13 · Register your node. The location is automatic. 18

14 · Done: your node is on 20

Part C · Check your airdrop 21

15 · Open My Airdrop 21

16 · Quick check on the airdrop page 22

Problems and support 23

AIRDROP GENESIS · STEP-BY-STEP GUIDE

How to join the Sectora airdrop, step by step.

This guide takes you from your **very first click** to a **Hash Node that is on and counting**. Every step says exactly what to press, what you should see and what not to do, with a screenshot. Read one step, do it, then go to the next. **About 20 minutes.**

THE WHOLE AIRDROP IN ONE SENTENCE

You need only two things, **with the same wallet:**

1. **#SECT in staking**
   At least 100 #SECT in the official staking, on Ethereum. Part A.

2. **Your Hash Node turned on**
   On the Sectora test network. 100% free. Part B.

When both are true, your airdrop count starts by itself. **No sign-up, no forms.**

Already staking #SECT? You're already in.

You don't have to do anything else with your staking. **Don't withdraw anything.** Skip Part A and go straight to Part B: just turn on your Hash Node **with the same wallet you stake with**, and you start taking part.

PART A · STEPS 1–7
Stake your #SECT
Ethereum mainnet. Uses your real #SECT and a little ETH for the fee.
≈ 5 minutes

PART B · STEPS 8–14
Turn on your Hash Node
Sectora test network. Free test coins: you spend no real money.
≈ 10 minutes

PART C · STEPS 15–16
Check your airdrop
See your level, your prize and your count growing.
≈ 1 minute

00 · BEFORE YOU START

Have these four things ready.

01

A crypto wallet

MetaMask, Trust Wallet, Coinbase Wallet, OKX, Binance Wallet or any Ethereum wallet. On your phone or your computer.

02

At least 100 #SECT

In that wallet. Don't have them yet? Buy them on Uniswap with our step-by-step buying guide.

03

A little ETH

On Ethereum, in the same wallet. It pays the network fees (a few dollars).

04 · MOST IMPORTANT

ONE wallet for everything

Your staking and your node must use the **same wallet address**. Using two different wallets is the most common mistake.

Three safety rules. Never break them.

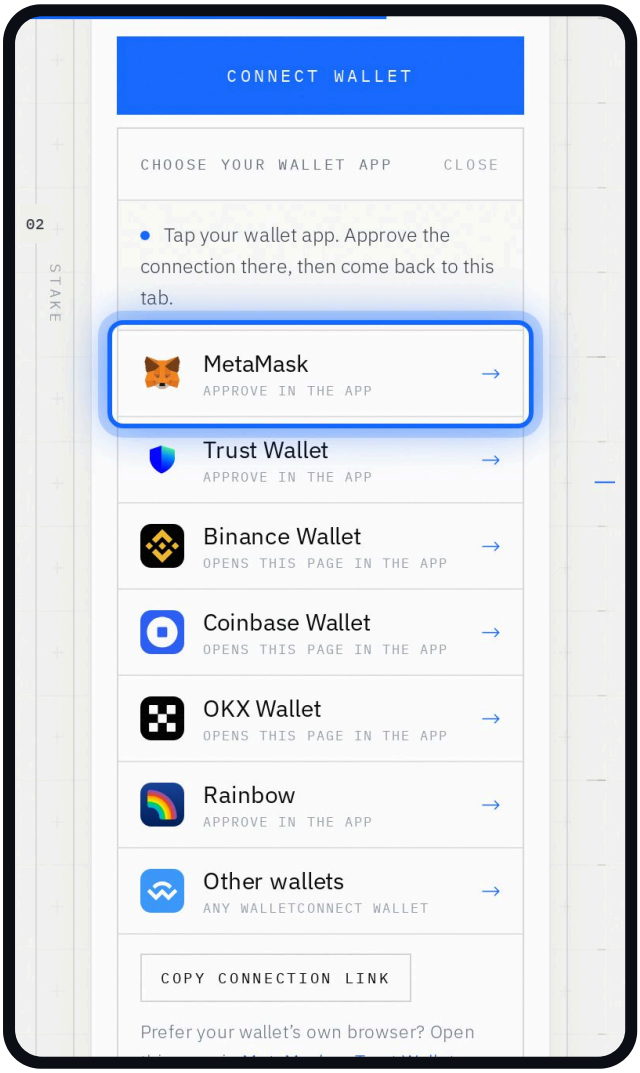

1. Never give anyone your secret recovery phrase (the 12 or 24 words) or your private key. Sectora will never ask for them. **2.** Only use **sectoraorg.com**: check the address bar every time. **3.** Nobody from Sectora will message you first to “help” you. If someone does, it is a scam.

ON A PHONE

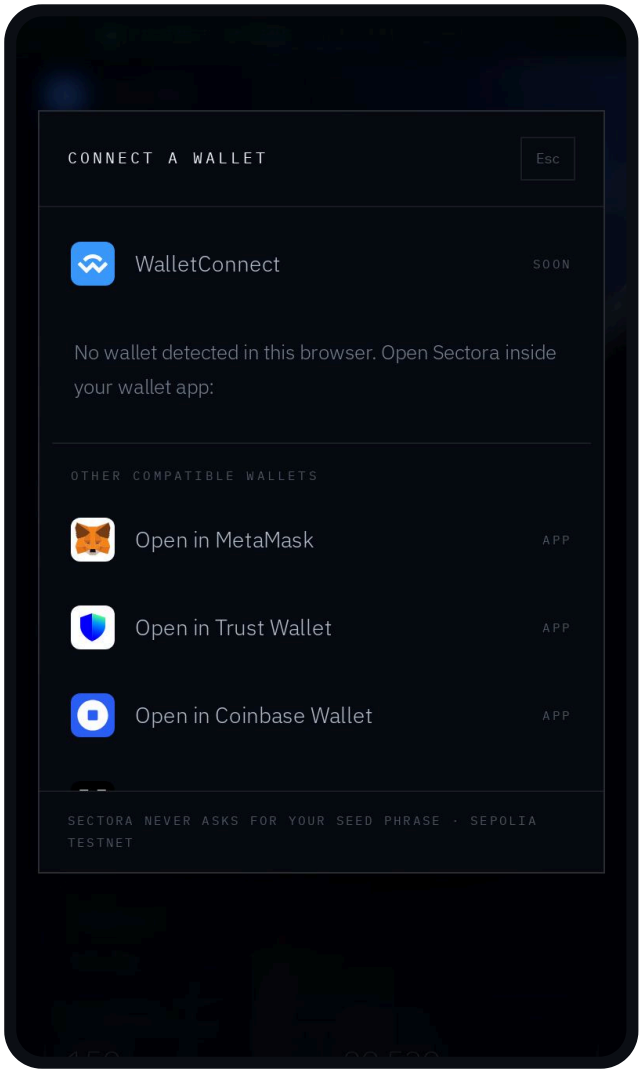

Using a phone? Read this first.

Everything in this guide works on a phone. You only need your wallet app installed (MetaMask, Trust Wallet, Coinbase Wallet...).

1. **Staking (Part A):** open **sectoraorg.com/staking** in Chrome or Safari and press `Connect wallet`. Tap your wallet app in the list, approve there and come back to the browser.
2. **Node (Part B):** open **sectoraorg.com/dashboard** and press `Connect wallet`. On a phone it shows `Open in MetaMask` (or your wallet): tap it and the dashboard opens **inside your wallet app**. Continue there.
3. **Inside the wallet app** everything connects directly. Use the same wallet app for everything.

sectoraorg.com/staking

sectoraorg.com/dashboard

If the wallet app doesn't open, open it yourself, find its built-in browser (often called **Browser**, **Explore** or **Discover**) and type the address there.

PART A · STEPS 1–7 · ≈ 5 MINUTES

A

Stake your #SECT

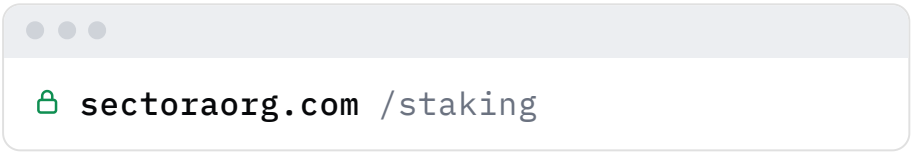

You put your #SECT in the official staking. They stay yours, earn staking rewards every second and count for the airdrop. Already staking? Skip to Part B.

01

STEP 1 OF 16 · BROWSER

Open the staking page

1. Open your browser: Chrome, Safari, or the browser inside your wallet app.
2. Type exactly **sectoraorg.com/staking** and open it.
3. Scroll down until you see the white box called **“Staking console”**.

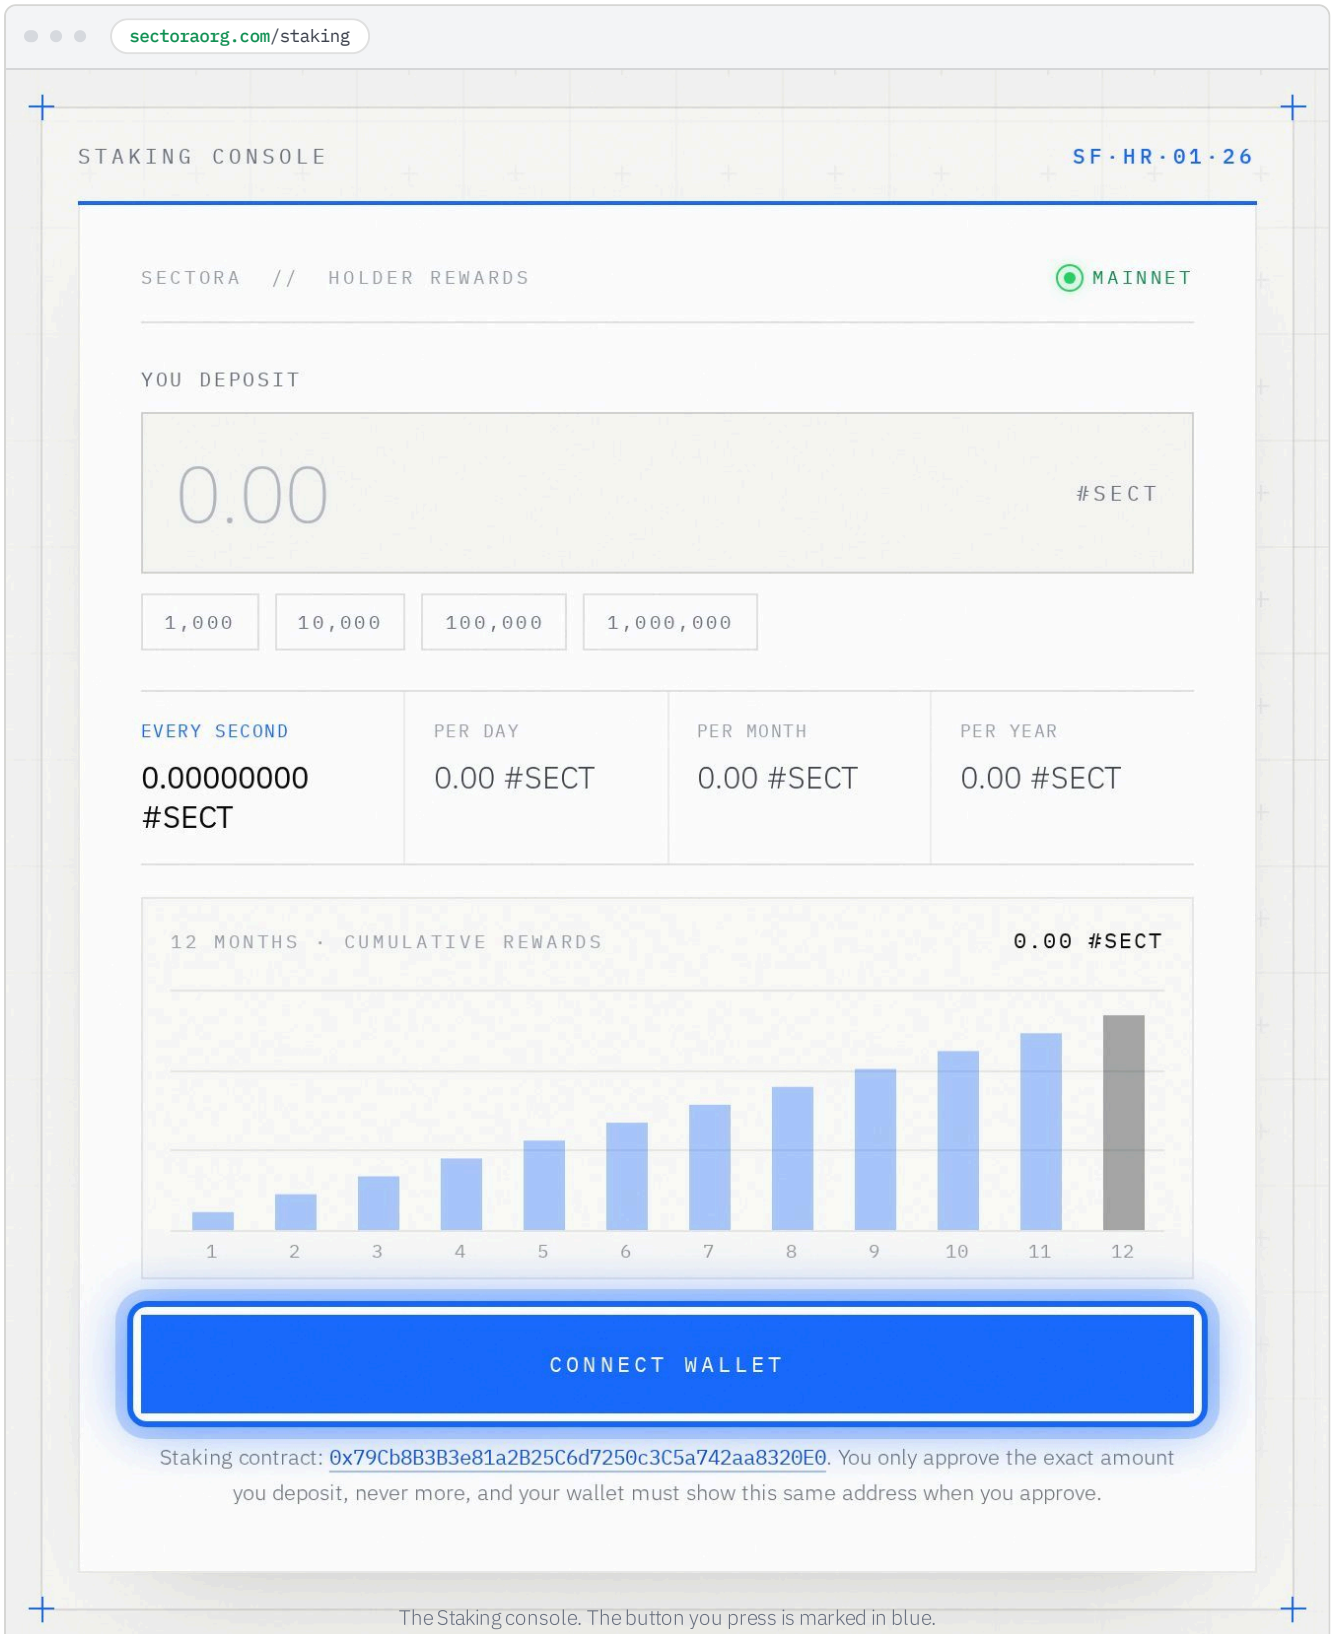

⚠ **Check the address bar.** The only real page is **sectoraorg.com/staking**. If it says anything else, close it.

02

STEP 2 OF 16 · STAKING CONSOLE

Press “Connect wallet”

1. At the bottom of the Staking console there is a big blue button.
2. Press `Connect wallet`.

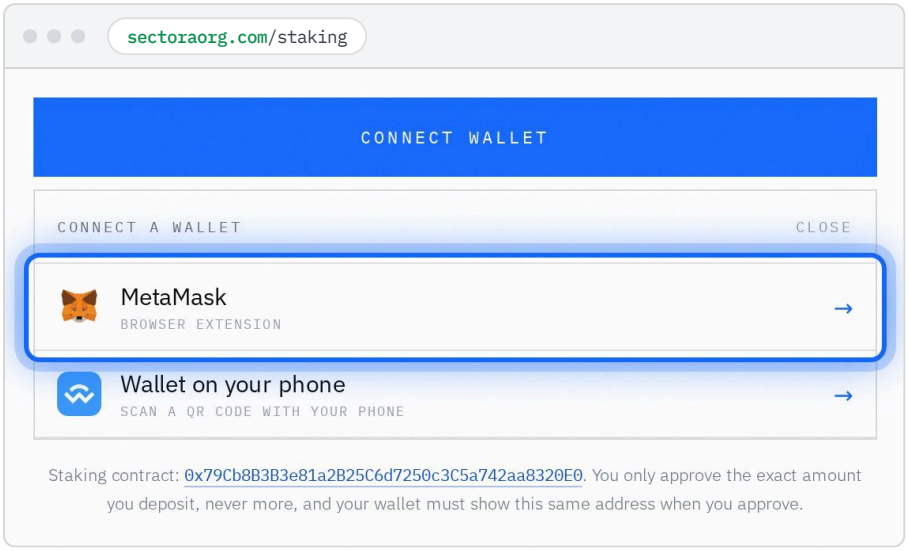

The Staking console. The button you press is marked in blue.

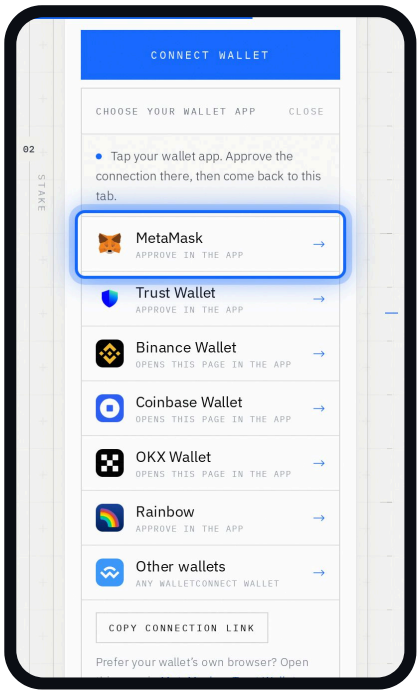

03 Choose your wallet

STEP 3 OF 16 · YOUR WALLET

1. A list opens under the button.
2. **On a computer:** press your wallet (for example **MetaMask**). Your wallet opens: press **Connect**.
3. **On a phone (Chrome or Safari):** tap your wallet app. The app opens: press **Connect** there, then **go back to the browser tab**.

On a computer: your browser wallet appears first.

On a phone: the list of wallet apps.

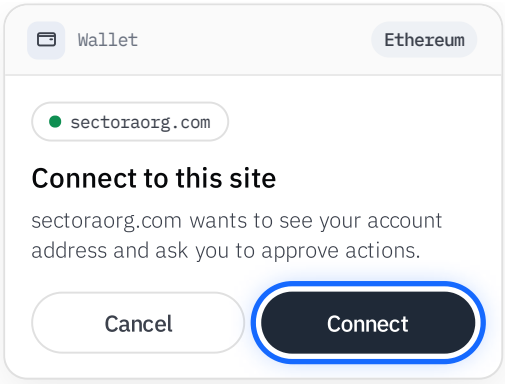

Illustration · your wallet may look a little different

04 STEP 4 OF 16 · CHECK

Check that you are connected

1. Look at the big blue button: it now shows **your wallet address**, short, like `0x4b2f…4b3c`.
2. Under it you now see three buttons: `Deposit #SECT` `Withdraw` `Withdraw all`.

✓ **It worked** if you see your address on the button.

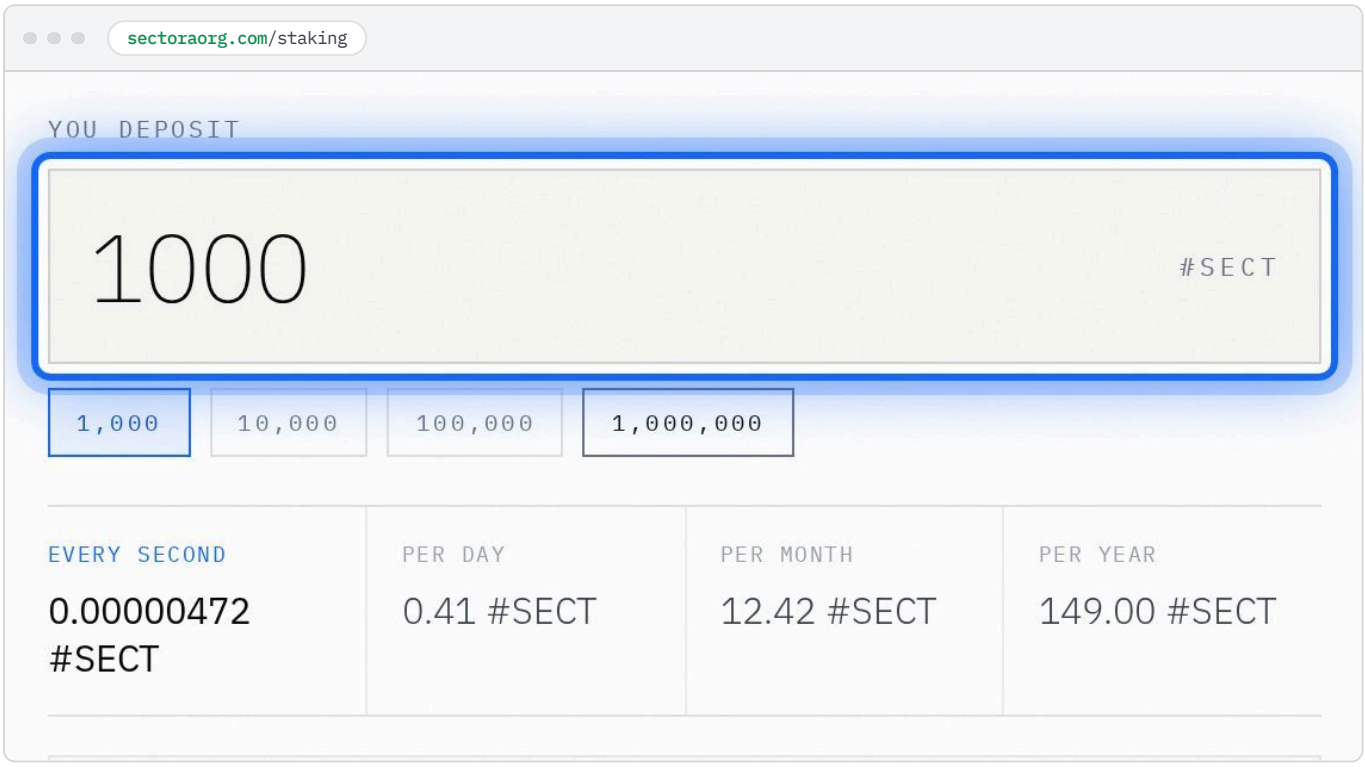

⚠ **Red message "Switch your wallet to the Ethereum network"?** Open your wallet, change the network to **Ethereum** (Ethereum Mainnet) and reload the page.

05

STEP 5 OF 16 · AMOUNT

Type how many #SECT you stake

1. Press the box **“You deposit”**.
2. Type the number of #SECT. Only the number, for example **1000**. No dots, no commas.

How much? At least **100 #SECT** to take part in the airdrop. The more you stake, the higher your level:

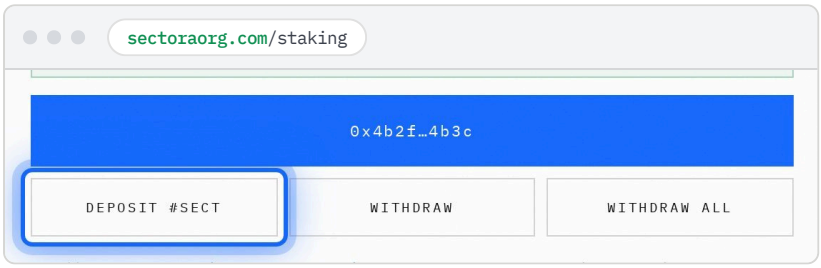

SCOUT	SENTINEL	GUARDIAN	TITAN
100 #SECT	**500 #SECT**	**1,000 #SECT**	**4,000 #SECT**
prize 55 SECT	prize 325 SECT	prize 750 SECT	prize 3,600 SECT · no maximum

06

STEP 6 OF 16 · WALLET · CONFIRMATION 1 OF 2

Press “Deposit #SECT” and approve

1. Press `Deposit #SECT`.
2. Your wallet opens and asks you to **approve** a “spending cap”. This only allows the staking contract to take **exactly** the amount you typed, never more. Nothing moves yet.
3. Check the details below, then press **Confirm** in your wallet.
4. **Wait.** Don't close the page. It takes from a few seconds to a minute.

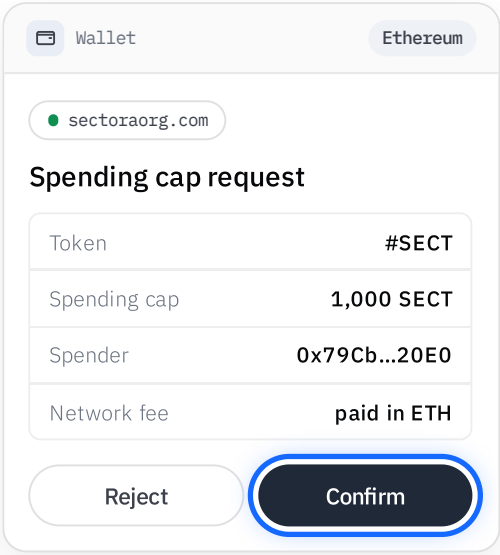

Illustration · your wallet may look a little different

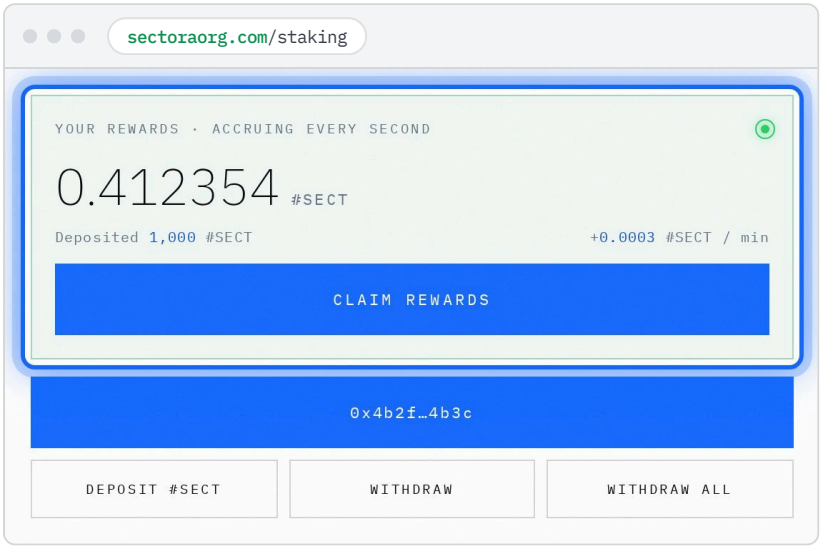

CHECK THIS IN YOUR WALLET BEFORE YOU PRESS CONFIRM	
Request	Approve · spending cap
Amount	The exact #SECT you typed
Contract	`0x79Cb8B3B3e81a2B25C6d7250c3C5a742aa8320E0`
Fee	A small amount of ETH (your wallet shows it)

07

STEP 7 OF 16 · WALLET · CONFIRMATION 2 OF 2

Confirm the deposit

1. When the approval is done, your wallet opens **a second time** by itself, now for the **deposit**.
2. Press **Confirm** again. Wait a few seconds.
3. A green box appears: **“Your rewards · accruing every second”**, with **“Deposited”** and your amount.

Your staking is done: the deposit shows and your rewards grow every second.

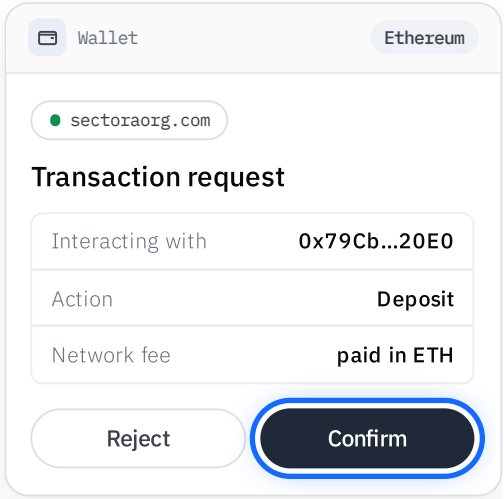

Illustration · your wallet may look a little different

⚠ **Leave your #SECT in the staking.** Only staked #SECT count for the airdrop. Keep them there until you complete your time. You still earn your normal staking rewards.

Part A done.
Your #SECT are staked. Now turn on your node with this same wallet.

PART B · STEPS 8–14 · ≈ 10 MINUTES

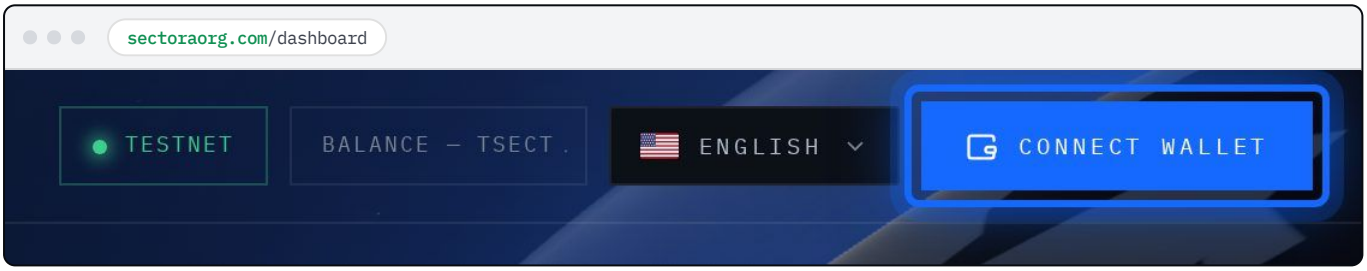

B Turn on your Hash Node

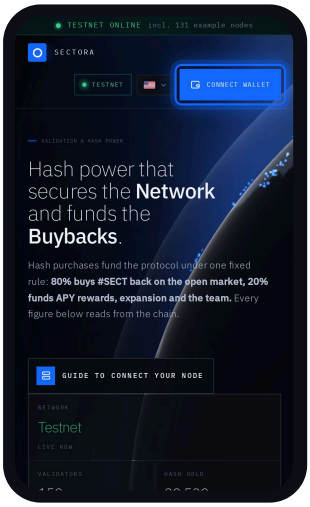

The Hash Node runs on Sectora's test network (Sepolia). **Everything in Part B is free:** you use free test coins that have no value. You never spend real money here.

08 STEP 8 OF 16 · DASHBOARD

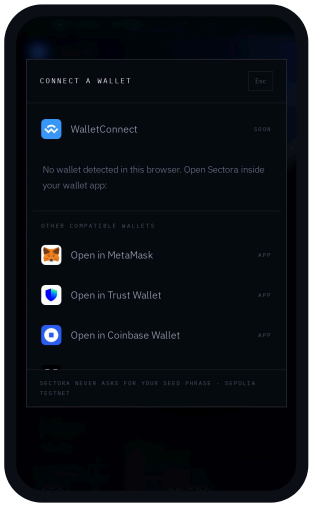

Open the dashboard and press “Connect wallet”

1. Open **sectoraorg.com/dashboard**.
2. At the top right, press `Connect wallet`.
3. **On a phone (Chrome or Safari):** a list appears. Tap `Open in MetaMask` (or your wallet) and the dashboard opens inside your wallet app. Press `Connect wallet` again there.

On a phone: `Connect wallet` at the top.

On a phone without a wallet: `Open in MetaMask`.

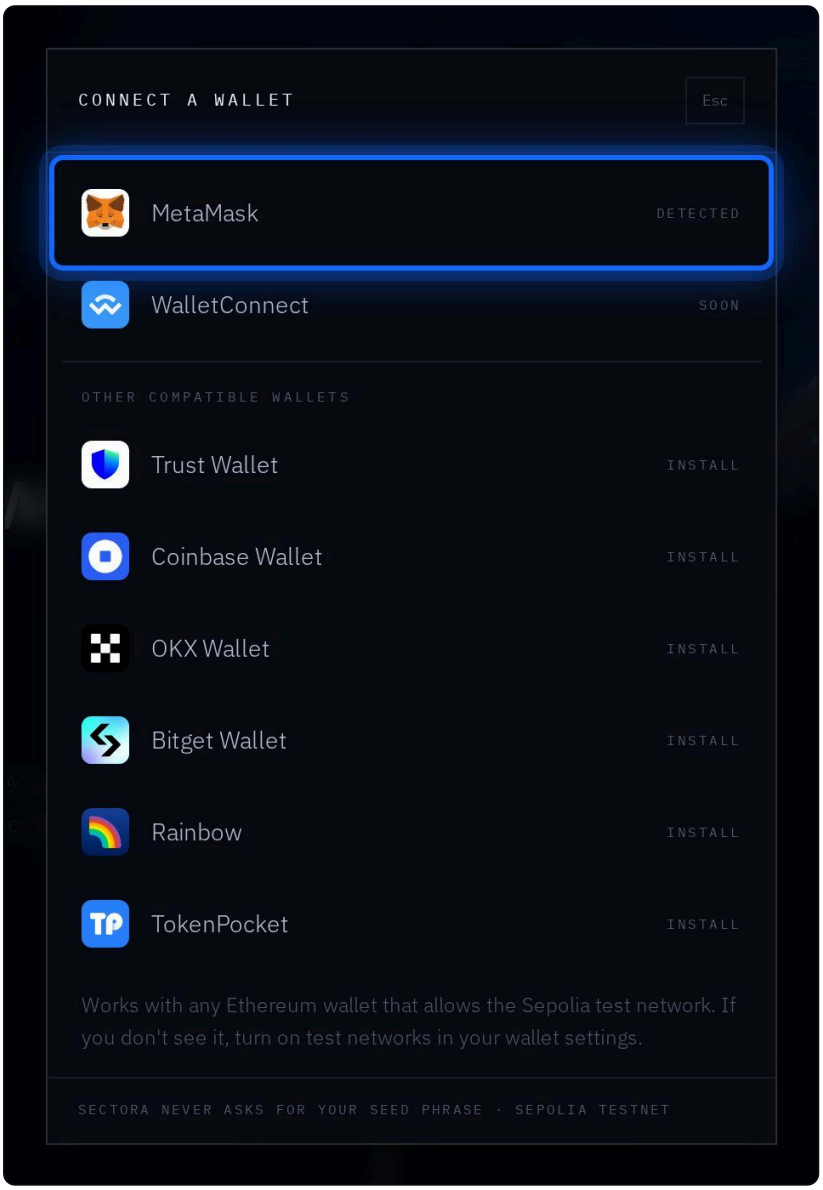

⚠ **Use the SAME wallet you staked with.** If your node is on another wallet, it does not count for your airdrop.

09

STEP 9 OF 16 · YOUR WALLET

Choose your wallet and accept the test network

1. In the list "`Connect a wallet`", press your wallet (it says `Detected`).
2. In your wallet, press **Connect**.
3. The dashboard moves your wallet to the **Sepolia** test network by itself. If your wallet asks to switch or add the network, press **Approve** or **Switch network**.

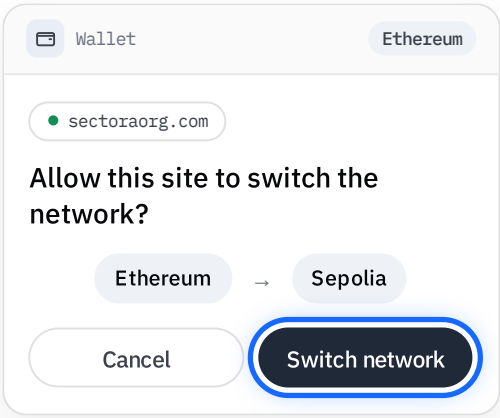

Illustration · your wallet may look a little different

ⓘ **Your wallet doesn't show Sepolia?** Open your wallet settings and turn on **"Show test networks"**. Then try again.

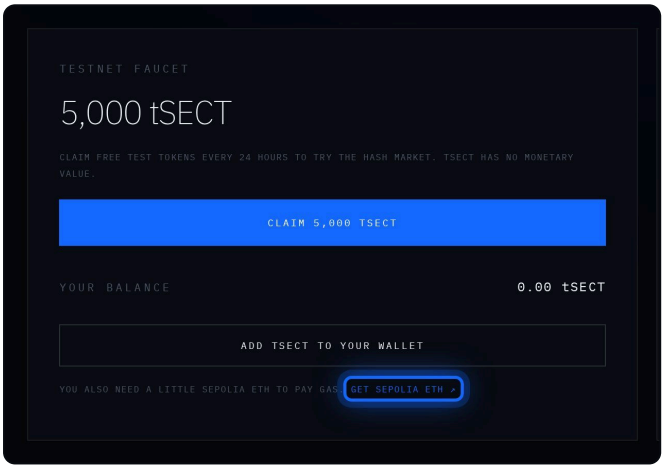

10

STEP 10 OF 16 · FREE GAS

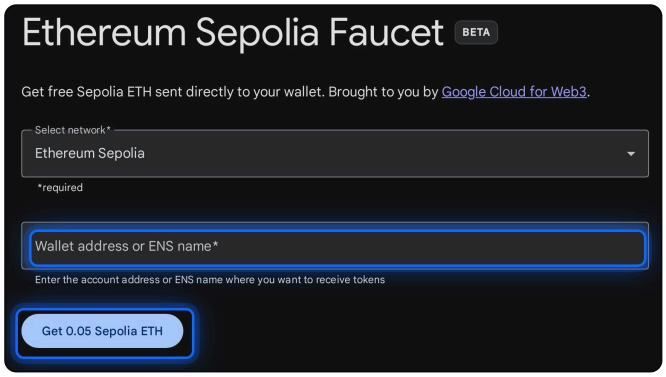

Get free Sepolia ETH for gas

1. Every action on the test network needs a little **Sepolia ETH**. It is a free test coin with no value.
2. Go down to “`Faucet & rewards`”. In the box “`Testnet faucet`”, press `Get Sepolia ETH`.
3. A Google Cloud page opens. Check that the network is **Ethereum Sepolia**, paste your wallet address in **“Wallet address or ENS name”** and press **Get 0.05 Sepolia ETH**. If it asks, sign in with a Google account.
4. Come back to the dashboard tab.

> ⓘ **How do I copy my address?** Open your wallet and tap your account name or address at the top: it copies by itself.

In the dashboard: the link to the faucet.

The Google Cloud faucet: (1) your address · (2) Get 0.05 Sepolia ETH.

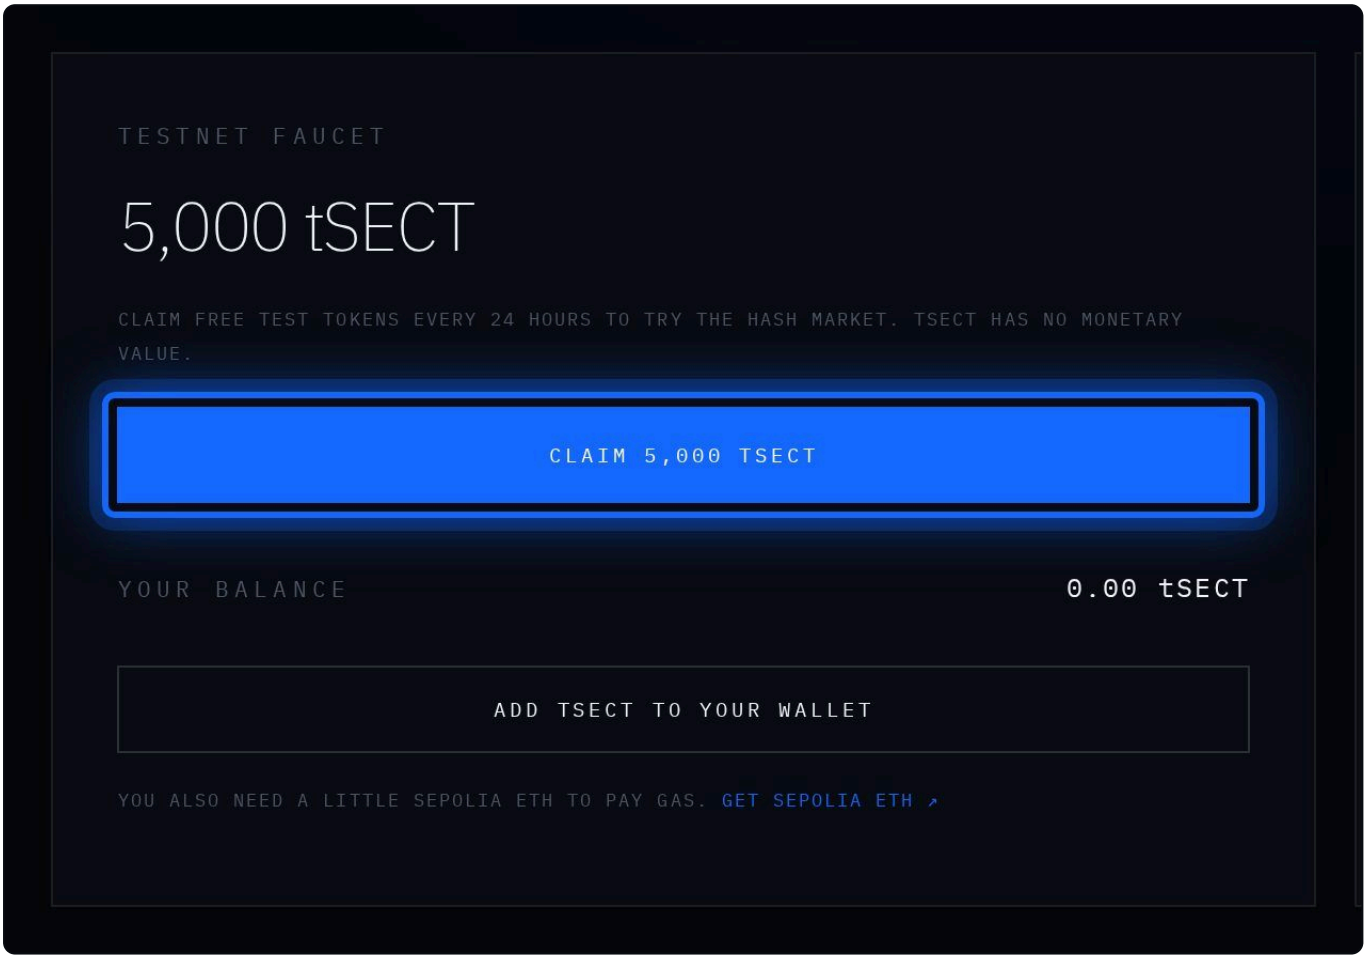

> ⚠ **Google says you need 0.001 ETH on Ethereum Mainnet?** Google's faucet only gives Sepolia ETH to wallets that hold at least 0.001 real ETH on Ethereum. Keep a little ETH in your wallet (you need it for Part A anyway) and try again.

11

STEP 11 OF 16 · FREE TEST TOKENS

Claim 5,000 free tSECT

1. In the same box, press `Claim 5,000 tSECT`.
2. Your wallet opens: press **Confirm**.
3. Wait a few seconds. "`Your balance`" now shows **5,000 tSECT**.

ⓘ tSECT are **test tokens with no money value**. You can claim them again every 24 hours.

12

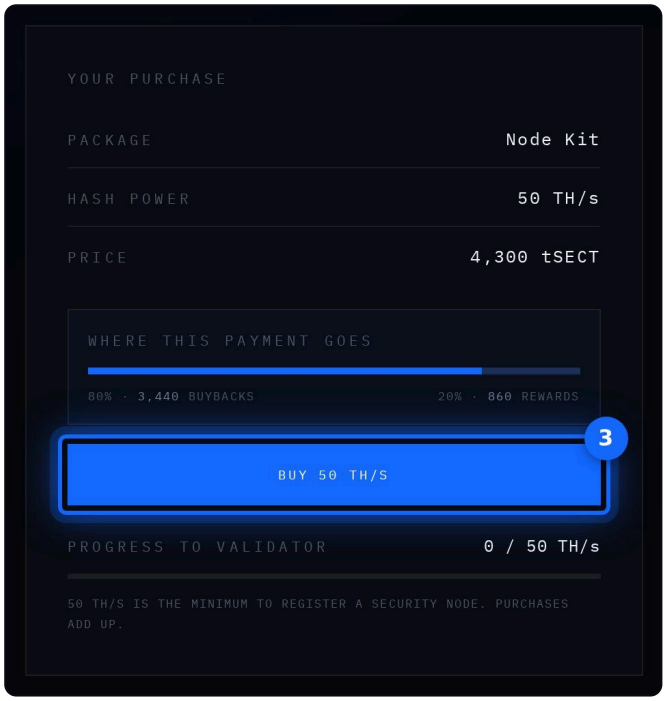

STEP 12 OF 16 · HASH MARKET

Buy the Node Kit · 50 TH/s

1. Go down to “`Hash market`”.
2. Open the tab `Physical node` **(1)**.
3. Press the card **50 TH/s · 4,300 tSECT**, marked `Airdrop plan` **(2)**. This is the node that works for the airdrop.
4. Press `Buy 50 TH/s` **(3)**.
5. Your wallet opens **two times**: first to allow the payment, then to confirm the purchase. Press **Confirm** both times.

(1) `Physical node` · (2) 50 TH/s · `Airdrop plan`

(3) `Buy 50 TH/s`

✓ The 4,300 tSECT come from the 5,000 free tSECT of step 11. **No real money.**

13

STEP 13 OF 16 · YOUR NODE

Register your node. The location is automatic.

1. Go down to “`Your node`”.
2. Your node's location is **already detected (1)** and its name is **already filled in**. You don't type anything.
3. Press `Register node` **(2)**.
4. Your wallet opens: press **Confirm**.

(1) Location detected automatically · (2) `Register node`

About the location. Our systems detect your node's approximate location from your connection and fill it in for you. Only the **city** is saved on the network, **never your address**. The location is wrong (for example because of a VPN)? Press “`Change`” and correct it.

13

STEP 13 OF 16 · PLAN B

Register your node. The location is automatic.

STEP 13 · PLAN B · ONLY IF YOU SEE "`WE COULDN'T DETECT THE LOCATION. ENTER IT BELOW.`"

Why	Sometimes a VPN, an ad-blocker or a strict browser blocks the detection. Then two boxes appear: `Latitude` and `Longitude`.
Find the numbers	Open Google Maps and search for **your city**. On a computer, right-click the city center; on a phone, press and hold it. You see two numbers, like `40.4168, -3.7038`.
Fill them in	The **first** number goes in `Latitude` **(1)**. The **second** number goes in `Longitude` **(2)**. Keep the minus sign if there is one.
Then	Press `Register node` and confirm in your wallet. Use your city, not your home.

Only when the location could not be detected: (1) `Latitude` · (2) `Longitude`

14

STEP 14 OF 16 · DONE

Done: your node is on

1. The button changes to `Registered`.
2. Your node appears on the network map. From now on, it counts.

YES

You can close the tab

Your node stays on in the network by itself.

YES

You can turn off your computer

Your node does not depend on your computer or your phone.

NO

Never deactivate your node

A deactivated node stops counting until you turn it on again.

Part B done. You are in the airdrop.

Staking + node on, with the same wallet. Your count is running.

PART C · STEPS 15–16 · ≈ 1 MINUTE

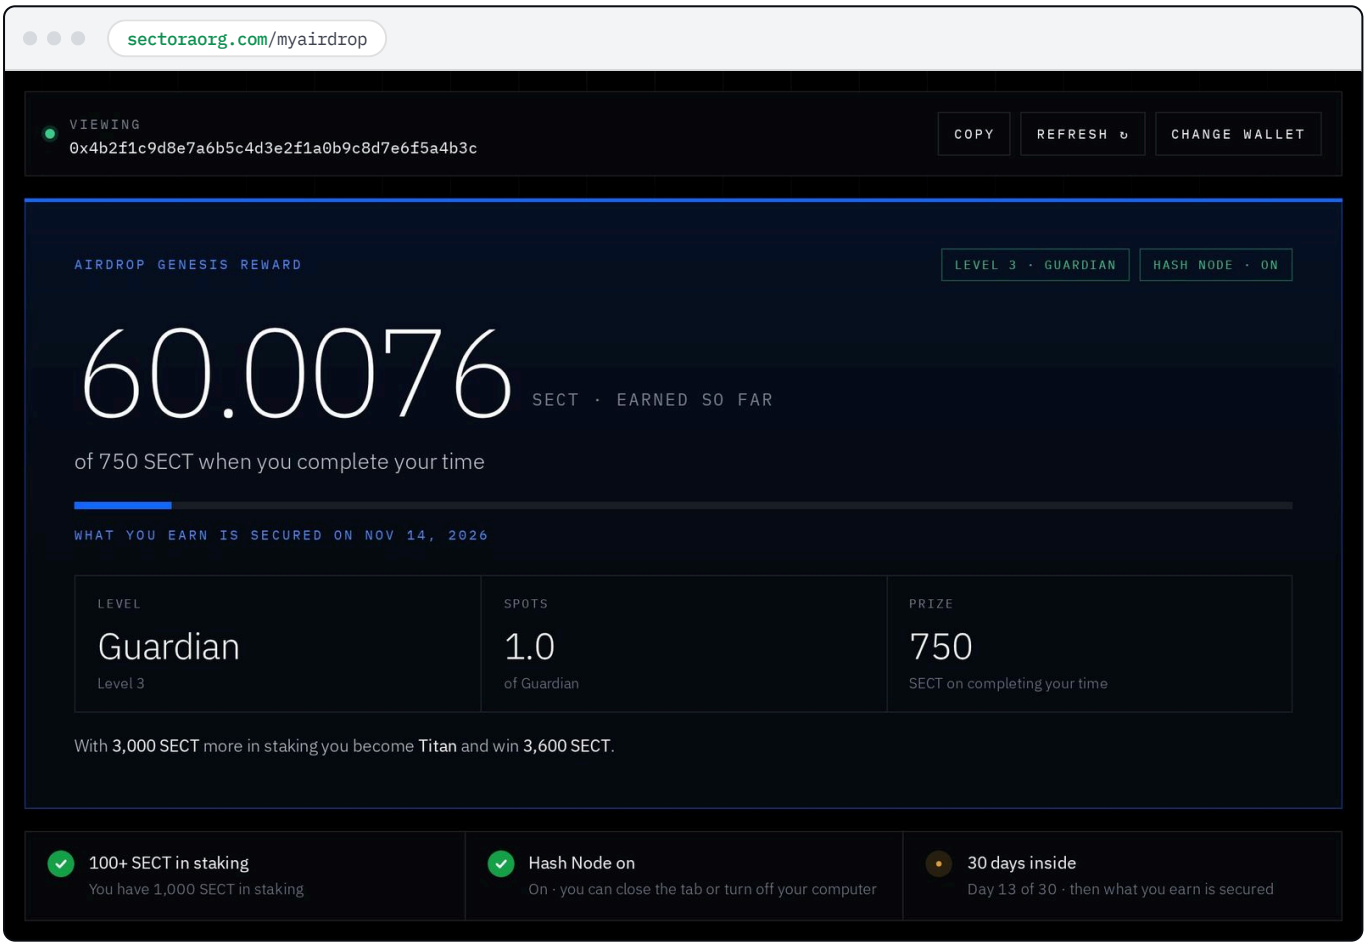

C Check your airdrop

See your level, your prize and the three requirements, read live from the blockchain. Looking is free: no signature, no transaction.

15 STEP 15 OF 16 · MY AIRDROP

Open My Airdrop

1. Open **sectoraorg.com/myairdrop**.
2. Press `Connect wallet`, or paste your wallet address and press `Check`.
3. You see what you have earned so far, your **level**, your **prize** and the three requirements.

Example: 1,000 #SECT staked = Guardian, prize 750 SECT.

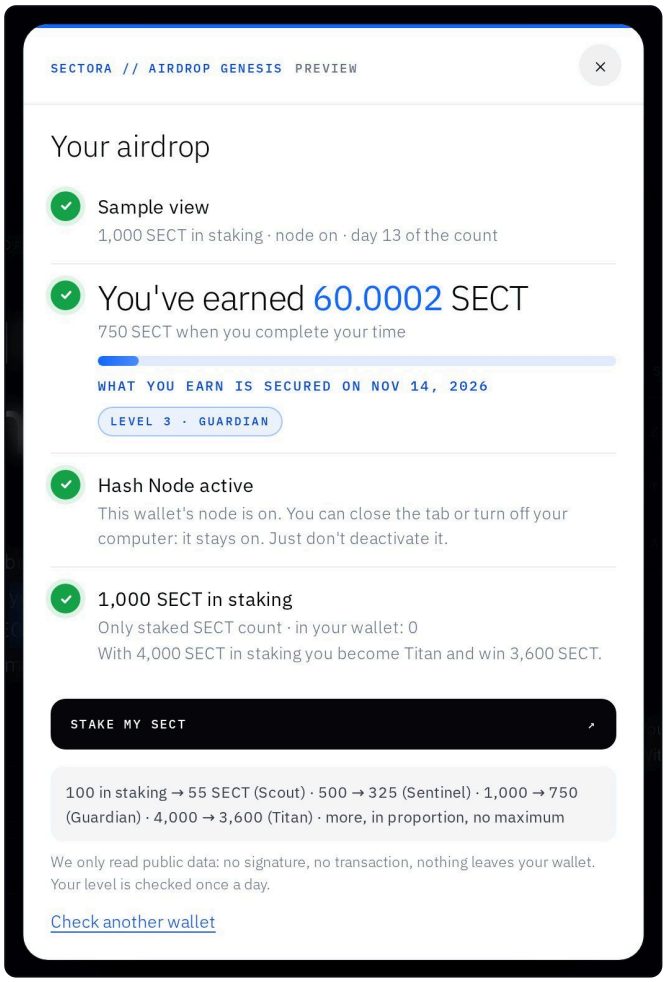

THE THREE REQUIREMENTS	
✓ 100+ SECT in staking	Done in Part A.
✓ Hash Node on	Done in Part B.
30 days inside	Starts by itself when the two above are true. Just wait and don't touch anything.

16 STEP 16 OF 16 · AIRDROP PAGE
Quick check on the airdrop page

1. Open the airdrop page, **sectoraorg.com/airdroptesting**, and press `Take part`.
2. Connect your wallet. The window **“Your airdrop”** shows what you have earned so far, your prize and your level.

The airdrop page: press `Take part`.

Example of the “Your airdrop” window.

✓ **When do I receive my SECT?** On SectoraEVM, at its mainnet launch. You will be able to follow it on SectoraScan.

PROBLEMS · QUICK ANSWERS

Something didn't work? Look here first.

“Not enough ETH” on the staking page

Part A uses real Ethereum. Add a little ETH (on Ethereum) to the same wallet and try again.

“Not enough gas” on the dashboard

Part B uses free Sepolia ETH. Repeat step 10.

Google's faucet asks for 0.001 ETH on Ethereum

Your wallet needs at least 0.001 real ETH on Ethereum to use Google's faucet. Keep a little ETH in it and try again, or write to support.

My wallet doesn't show Sepolia

In your wallet settings, turn on “Show test networks”. Then reload the dashboard.

“Switch your wallet to the Ethereum network”

You are on the staking page with the wrong network. In your wallet, choose Ethereum (Ethereum Mainnet) and reload.

“You do not have that many #SECT in your wallet”

Type a smaller amount, or buy more #SECT with our buying guide.

I don't have enough tSECT to buy the Node Kit

Claim 5,000 tSECT in step 11. Already claimed today? Wait 24 hours and claim again.

I used a different wallet for the node

It doesn't count. Connect your **staking wallet** on the dashboard and repeat Part B with it.

The location wasn't detected, or it is wrong

Press “Change”, or follow Plan B in step 13. Use your city, not your home.

The wallet window didn't open

Open your wallet app or extension yourself: the request is waiting there. On a phone, after approving, go back to the browser tab.

Do I have to keep my computer on?

No. Once registered, your node stays on by itself. Just never deactivate it.

Do I have to withdraw my staking to join?

No. Never. Your staked #SECT count as they are, and you keep earning your staking rewards.

Does Part B cost money?

No. tSECT and Sepolia ETH are free test coins with no value.

SUPPORT

Still stuck? Write to us.

Send an email to our support team with the subject **“Airdrop Connection”**. To help you fast, include:

1. Your **public** wallet address (starts with 0x).
2. The **step number** where you got stuck.
3. A **screenshot** of the error.

EMAIL
support@sectoraorg.com

SUBJECT
Airdrop Connection

Never
send your recovery phrase (12 or 24 words) or your private key. Not to us, not to anyone.

Three safety rules. Never break them.

1. Never give anyone your secret recovery phrase (the 12 or 24 words) or your private key. Sectora will never ask for them. **2.** Only use **sectoraorg.com**: check the address bar every time. **3.** Nobody from Sectora will message you first to “help” you. If someone does, it is a scam.
