Sectora ($SECT) – Cybersecurity and RWA token

1. INTRODUCTION

This document contains the official information that Sectora Foundation provides to the content creators taking part in the $SECT launch campaign. It sets out the points to be covered in the video, the purchase procedure and the verification link for each fact. Please check the information against those links before publishing.

2. PROJECT FACT SHEET

- Project: Sectora Foundation, a cybersecurity firm for the crypto ecosystem and tokenized real-world assets (RWA).
Verification: https://sectoraorg.com
- Token: $SECT, ERC-20 standard on the Ethereum network.
Verification: https://etherscan.io/token/0x8c9984b06281f1ca9416e493c2e602aab08513db?a=0xa12a11fc202827b7c734cf2019f2c7a6cf061d69
- Contract address: 0x8C9984B06281f1CA9416e493c2E602AaB08513db
Verification: https://etherscan.io/address/0x8C9984B06281f1CA9416e493c2E602AaB08513db
- Maximum initial supply: 50,000,000 $SECT, to be reduced to 25,000,000 through the scheduled supply reduction.
Verification: https://etherscan.io/token/0x8c9984b06281f1ca9416e493c2e602aab08513db?a=0xa12a11fc202827b7c734cf2019f2c7a6cf061d69
- Taxes: 0% on buys and 0% on sells.
Verification: https://sectoraorg.com/docs#s03
- Staking: 14.9% APY on Ethereum mainnet, accrued every second, with no lock-up.
Verification: https://sectoraorg.com/staking/
- Entity: company registered in Chicago, Illinois, United States, file number 18523639.
Verification: https://sectoraorg.com/docs#s02
- Market: Uniswap V3, SECT/USDT pair.
Verification: https://app.uniswap.org/explore/pools/ethereum/0xa12a11fc202827b7c734cf2019f2c7a6cf061d69
- CoinGecko: $SECT is listed on CoinGecko, with price, market capitalization and market data.
Verification: https://www.coingecko.com/en/coins/sectora

3. POINTS TO COVER IN THE VIDEO

3.1 Review of the full website

The video should open with a walkthrough of the official website, sectoraorg.com, showing its main sections: what Sectora is, the founders' statement, distribution with no presale, verification, the projects, the roadmap, the supply, press and events.
Official website: https://sectoraorg.com
Whitepaper: https://sectoraorg.com/docs

3.2 The founders' message

Must be included in the video:

> "Sectora's founders are clear: $SECT is not a pump-and-dump token. It is a token built to be held as the project progresses and scales, not for short-term speculation. The fixed supply, the renounced contract, the locked liquidity and the public audit remove the mechanisms that pump-and-dump schemes rely on. Every holder is free to buy and sell whenever they choose, without restrictions. The

> project advances with each milestone, starting today: from the products already live on testnet to the 50% supply reduction."

Verification (section on the website): https://sectoraorg.com/#statement

Verification (contract code): https://etherscan.io/address/0x8C9984B06281f1CA9416e493c2E602AaB08513db#code

3.3 Maximum initial supply

The maximum initial supply is 50 million $SECT. The contract has no mint function, so no additional tokens can be created.

Verification (total supply): https://etherscan.io/token/0x8c9984b06281f1ca9416e493c2e602aab08513db?a=0xa12a11fc202827b7c734cf2019f2c7a6cf061d69

Verification (code, no mint function): https://etherscan.io/address/0x8C9984B06281f1CA9416e493c2E602AaB08513db#code

3.4 50% supply reduction

The supply will be reduced by 50%, on a single occasion: from 50 million to 25 million $SECT. After the reduction, the supply remains fixed at 25 million.

Verification (supply and reduction): https://sectoraorg.com/docs#s05

3.5 Supply calculator

The website includes a table that compares $SECT with reference networks and shows the price it would have at 1%, 5% or 10% of their market capitalization. It must be presented only as an illustrative example to understand the supply, never as a price prediction.

Note for creators: Show the 1% scenario in the calculator on sectoraorg.com and comment on the reference price it gives $SECT against each coin.

Verification: https://sectoraorg.com/#supply

Whitepaper explanation: https://sectoraorg.com/docs#s06

3.6 Contract verified on Etherscan

The contract source code is public and verified on Etherscan (green check on the "Contract" tab). Anyone can review it, as well as the holders and every transaction.

Verification: https://etherscan.io/address/0x8C9984B06281f1CA9416e493c2E602AaB08513db#code

3.7 Renounced contract

Ownership of the contract has been renounced: no address holds special permissions to change its parameters. On the "Read Contract" tab, the "owner" function returns the zero address (0x000...000).

Verification: https://etherscan.io/address/0x8C9984B06281f1CA9416e493c2E602AaB08513db#readContract

Whitepaper explanation: https://sectoraorg.com/docs#s03

3.8 Passed audit

The contract passed an independent security audit by Cyberscope. The full report is publicly available.

Verification: https://www.cyberscope.io/audits/sect

3.9 Registered company

Sectora Foundation is a company registered in Chicago, Illinois (United States), file number 18523639. The registration can be checked in the official search of the Illinois Secretary of State using that number.

Verification (whitepaper, with the procedure): https://sectoraorg.com/docs#s02

Verification (official Illinois registry): https://apps.ilsos.gov/corporatellc/CorporateLlcController

Legal documents: https://sectoraorg.com/legal

3.10 Sectora's projects

We recommend reviewing each project on the website before recording. Five of them are already open on testnet:

- Sectora L3 Network: a layer-3 blockchain built for tokenized assets, with its own explorer, SectoraScan. Its mainnet launch is planned for 2027.

Review: https://sectoraorg.com/sectorascan

Whitepaper: https://sectoraorg.com/docs#s07

- Asset tokenization (RWA): issuance and management of real-world assets on the network.

Review: https://sectoraorg.com/sectorascan#/tokenize

Whitepaper: https://sectoraorg.com/docs#s09

- Security node validation (Validation Network): sale of hash power to validate the network and earn rewards.

Review: https://sectoraorg.com/dash

Whitepaper: https://sectoraorg.com/docs#s08

- Cybersecurity software (Sectora Shield): a post-quantum security engine based on the NIST standards (FIPS 203, 204 and 205).

Review: https://sectoraorg.com/security

Whitepaper: https://sectoraorg.com/docs#s10

- Sectora DEX: a decentralized exchange where the assets issued on the network will be traded.

Review: https://sectoraorg.com/dex

Whitepaper: https://sectoraorg.com/docs#s11

The USD-SEC stablecoin is in development. Staking is already live on Ethereum mainnet (see point 3.12).

All projects: https://sectoraorg.com/#projects

> **Note on project revenue:** Revenue generated by these products is split under a fixed rule enforced by the protocol itself. On hash power sales and DEX fees, 80% goes to buying back $SECT on the market and 20% to APY rewards, protocol expansion and the team. On L3 network transaction fees, 67% goes to buybacks and 33% to validator rewards, expansion and the team. Bought-back $SECT is permanently removed from the supply. This revenue will begin once the products operate on mainnet.

Verification: https://sectoraorg.com/docs#s14

3.11 Locked liquidity

The initial liquidity on Uniswap is locked through Team Finance. Etherscan shows that the liquidity position belongs to the lock contract and not to the foundation.

Verification: https://etherscan.io/nft/0xc36442b4a4522e871399cd717abdd847ab11fe88/1360231

3.12 Staking on Ethereum mainnet: 14.9% APY

Must be included in the video:

> "Sectora's staking is already live on Ethereum mainnet. $SECT holders can deposit their tokens at sectoraorg.com/staking and earn 14.9% APY, accrued every second. There is no lock-up: you can claim your rewards and withdraw your deposit whenever you want, with no penalty. Rewards are paid from a pool of 1.49 million $SECT that the foundation loaded before the first deposit, and the contract is verified on Etherscan. The current rate is 14.9%, and the foundation can adjust it."

The video must show the staking console, which calculates what a deposit earns per second, per day, per month and per year before signing, as well as the step-by-step guide.

> **Note:** 14.9% is the current rate; the foundation can adjust it in the contract, and a change only applies from that moment on. It must not be presented as a guaranteed return or as a promise about the price of $SECT.

Verification (staking app): https://sectoraorg.com/staking/

Step-by-step guide: https://sectoraorg.com/staking/#guide

Contract verified on Etherscan: https://etherscan.io/address/0x79Cb8B3B3e81a2B25C6d7250c3C5a742aa8320E0#code

3.13 Why hold $SECT ("Why hold" section of the website)

Must be included in the video:

> "Why hold $SECT? Because everything is still ahead. Every milestone Sectora describes is still in front of the token, and that is a matter of record, not opinion. $SECT trades on Uniswap, on Ethereum: the supply reduction has not happened yet and no centralized exchange has listed it. Four products, the Layer 3 blockchain, the DEX, the hash market and the Sectora Shield cybersecurity software, already have finished interfaces and are in final testing on testnet. The calendar published by Sectora Foundation is this: on March 15, 2027, the supply reduction from 50 to 25 million $SECT; after that, exchange listings; from Q2 2027, the products in production; and in April 2027, the opening of the NYSE process. A holder today is positioned before every one of those events, not after them. Nothing about that is a forecast: it is simply where the calendar is."

The video must show the "Why hold #SECT?" section of the website: the four products, the supply reduction countdown and the sequence of events.

Note: The dates are the schedule published by Sectora Foundation. It must not be presented as a promise about the price of $SECT or as investment advice.

Verification (section on the website): https://sectoraorg.com/#why
Explanation in the whitepaper: https://sectoraorg.com/docs#s04

---

4. HOW TO BUY (TO EXPLAIN ON SCREEN)

1. Install an Ethereum-compatible wallet, such as MetaMask or Trust Wallet.
2. Hold USDT on the Ethereum network and a small amount of ETH for the network fee.
3. Buy $SECT only on the official Uniswap website (app.uniswap.org), using this official link:
https://app.uniswap.org/swap?inputCurrency=0xdAC17F958D2ee523a2206206994597C13D831ec7&outputCurrency=0x8C9984B06281f1CA9416e493c2E602AaB08513db&chain=ethereum
4. Check that the contract address is 0x8C9984B06281f1CA9416e493c2E602AaB08513db.
5. Connect the wallet, enter the USDT amount, review and confirm the transaction.
6. If the token does not appear in the wallet, import it using the contract address.

---
